SUMMARY

Android developer with 2.5+ years of professional experience. Since March 2024 at Sotech Bilgi Teknolojileri, I have been building the Android app of Bidsee, a live-stream auction and e-commerce platform, and authored 4,800+ of the roughly 6,300 commits in its production codebase. I focus on live streaming (AWS IVS, WebRTC), real-time communication (WebSocket), payment flows and app performance. I also build and publish multi-module personal apps on Google Play with Kotlin, Jetpack Compose and Kotlin Multiplatform. Graduate of Electrical and Electronics Engineering, Düzce University.

SKILLS

Languages and UI: Kotlin (primary), Java, Jetpack Compose, Material 3, XML / ViewBinding, Navigation 3, Glance widgets, Wear OS, SwiftUI

Architecture: MVVM, MVI, Clean Architecture, multi-module projects, Gradle convention plugins, Kotlin Multiplatform, Coroutines, Flow, LiveData, Hilt, Koin

Data and networking: Retrofit, OkHttp, Ktor, WebSocket, Room, DataStore, Paging 3, Supabase, Firebase (Auth, Firestore, FCM, Crashlytics, Performance, Remote Config)

Media: AWS IVS, WebRTC, Media3 / ExoPlayer, CameraX, Google Maps

Performance and testing: Baseline Profile, Macrobenchmark, R8 / ProGuard, JUnit, MockK, Turbine, Roborazzi, Detekt

Web and plugins: React, Vite, JavaScript; IntelliJ Platform SDK, PSI, Kotlin Analysis API

Release and process: Git / GitLab, GitHub Actions, Google Play Console, Play Billing, Agile / Scrum

EXPERIENCE

Android Developer — Sotech Bilgi Teknolojileri Mar 2024 – Present

Bidsee · live-stream auction and e-commerce app · Kotlin, XML Views, Hilt, Retrofit, Firebase

- **Live streaming:** Worked on viewer and broadcaster flows with AWS IVS and WebRTC-based multi-watch. Fixed player recovery after network drops and frozen-video bugs; built sharpest-frame selection from the live stream for product images.
- **Real-time layer:** Took part in migrating the infrastructure that carries chat, bid, countdown and payment events from MQTT to an OkHttp-based WebSocket gateway; fixed disconnect and client-conflict bugs.
- **E-commerce and payments:** Worked on cart, checkout, guest orders, payment polling, saved cards and addresses, store and order management, return flows, and the Play Billing-based Bidsee Plus subscription.
- **Performance:** Baseline and startup profile generation, Macrobenchmark for feed scrolling, RecyclerView recycling improvements, unused-resource cleanup, R8/ProGuard rules.
- **Stability:** Crash analysis with Firebase Crashlytics and Performance (e.g. pre-Android 14 WorkManager NoSuchMethodError, startup crash from a corrupted PaperDB file). Contributed to the 3.7.x releases.
- **Teamwork:** Feature/develop branching and merge requests on GitLab; CMS-driven localization and feature flags; API integration based on backend documentation.

Fogo Software Jul 2023 – Oct 2023

- Developed screens and features for a food-ordering app with Jetpack Compose.

Atak Mühendislik Jun 2023 – Aug 2023

- Temporary role in production planning and project tracking of steel materials for buildings in the earthquake region.

PROJECTS

Settowally — Wallpaper app (Google Play) 2024 – Present

Rewrote the app from Java to Kotlin and maintain it with Compose (v3.3.1). Downloads high-resolution photos from the Pexels API and sets them as wallpapers; adaptive layouts including tablets, blur effects with Haze, Turkish/English support. Releases are shipped with GitHub Actions.

Tech: Compose, Material 3 Expressive, Navigation 3, MVVM, Hilt, Room, Retrofit, Coil, Firebase Crashlytics
Source: github.com/AAyar94/Settowally

Smart Code Sorter X — IntelliJ IDEA / Android Studio plugin (JetBrains Marketplace) 2026

IDE plugin that automatically reorders Kotlin class members (properties, functions, constructor parameters) into a configurable order. Offers sort on save, a // @nosort marker to pin a declaration in place, a settings panel and a summary notification after each sort. Built on the Kotlin K2 Analysis API and PSI; supports both K1 and K2 modes; covered by unit and platform tests (v1.2.2).

Tech: Kotlin, IntelliJ Platform SDK, Kotlin K2 Analysis API, PSI, IntelliJ Platform Gradle Plugin, JUnit
JetBrains Marketplace: plugins.jetbrains.com/plugin/31219
Source: github.com/AAyar94/SmartCodeSorter-KotlinPlugin

Chronix — Countdown app (Google Play) 2026

Countdown tracker with home-screen widgets (2×2, 4×2, 4×4, timer), reminder and milestone notifications, calendar import, backup export/import, a share card and Play Billing purchases. Feature-based, layered multi-module Clean Architecture with Gradle convention plugins; covered by unit and screenshot (golden) tests and Detekt.

Tech: Compose, Navigation 3, Hilt, Room, WorkManager, Glance, Play Billing, Firebase, JUnit, MockK, Turbine, Roborazzi, Detekt
Source: github.com/AAyar94/Chronix
Google Play: play.google.com/store/apps/details?id=com.vnsapp.chronix

Vault — Personal budget tracker (Android + iOS, Kotlin Multiplatform) 2026

Cross-platform budget app with income/expense, budget and goal tracking and insight screens. Domain models, use cases and preferences live in a shared Kotlin Multiplatform module. Android: Compose, local-first (Room), optional Firebase sync, Google sign-in (Credential Manager), biometric lock, Glance widget. iOS: SwiftUI UI and WidgetKit widget in development.

Tech: Kotlin Multiplatform, Compose, SwiftUI, WidgetKit, Room, Koin, Firebase Auth/Firestore, Credential Manager, Biometric, Glance
Source: github.com/AAyar94/Vault

Aquatick — Hydration reminder (in development) 2026

Hydration reminder app with a heat-map calendar history and charts. Roughly 20-module Clean Architecture; Supabase auth and data, reminder notifications, and a Wear OS app that syncs drinks between watch and phone. 48 test files; APK releases built with GitHub Actions.

Tech: Compose, Navigation 3, Hilt, Room, Supabase, Wear OS (Data Layer), Vico, MockK
Source: github.com/AAyar94/Aquatick

Personal portfolio website (ademayar.dev) 2026

Portfolio site built with React and Vite, adapted from the open-source dev-portfolio template (MIT) with my own content and projects. Turkish/English localization, JSON-driven content, per-project detail pages, privacy-policy and license pages. Lint, test and build run in GitHub Actions before automatic deployment to GitHub Pages on a custom domain.

Tech: React 18, Vite, Bootstrap, styled-components, Vitest, ESLint, GitHub Actions, GitHub Pages

EDUCATION

Düzce University — Electrical and Electronics Engineering 2017 – 2022

Thesis: Network-based smart home automation and mobile application (Raspberry Pi)

OPEN SOURCE AND COMMUNITY

Active on GitHub (AAyar94); in my spare time I help translate projects into Turkish.
